A joint meeting of the popular North America-Greece-CyprusWorkshop on Paramagnetic Materials (NAGC 2017) and the Current Trends in Molecular and Nanoscale Magnetism (CTMNM 2017) Workshop will be held on May 8-12, 2017, in the city of Paphos on the west coast of the beautiful island of Cyprus in the eastern Mediterranean. This joint meeting is designed to allow us all to enjoy a broad program spanning many general areas of magnetism of one form or another. Following the great success of the previous CTMNM and NAGC Workshops, the 2017 joint meeting will again bring together a wide range of researchers - junior and senior, makers and measurers, experimentalists and theorists - working in diverse fields and applications.

The program will span various areas of chemistry, physics, and materials science, and encompasses any kind of study on any kind of system involving unpaired electrons: molecular or non-molecular; organic, inorganic, biochemical or biological; ground state or excited state; solid, liquid or gas. [1]

Figure. One figure, if you wish.

Cyprus is an island of great beauty and archaeological interest, full of UNESCO World Heritage sites (of which ten are Byzantine churches). Other areas not to be missed if you have time to explore are the capital Nicosia, Limassol on the south coast, and the central Mount Troodos (approximately 2000 metres or 6400 feet high) with its many picturesque villages.
