The 2025 meeting of the above popular conference will be held on May 4-9, 2025, on the beautiful island of Syros, Greece. This joint meeting is designed to allow us all to enjoy a broad program containing talks from various areas of chemistry and beyond.

The NAGC conferences alternate between Cyprus and Greece, and occasionally Florida. They were originally established to provide a regular forum for the faculty and students of universities in Greece and Cyprus to meet and interact with their North American counterparts, but they have since grown to become one of the most popular series of conferences involving scientists from North America, the Mediterranean, and elsewhere. Following the success of the previous NAGC meetings, we shall once again be organizing a broad program that will bring together a range of researchers working in diverse fields and applications who might not normally attend the same meeting [1].

Figure. One figure, if you wish. Restaurant under the bougainvillea

The event will begin with a welcoming reception on the evening of May 4, 2025. The talks will begin on the morning of May 5, and finish in the late afternoon of May 9. The talks will be 30 mins (15 mins for students), and there will be no parallel sessions, plenary lectures, or poster sessions.
